

Dental implants are most like natural teeth . . .

Advantages of Dental Implants?

Implants look and feel like your own teeth. Patients wearing removable dentures have issues with fit.

Dentures might slip and slide in the mouth when they are ill-fitting and cause the wearer to slur words, mumble, have sore spots or have difficulty chewing. With implants you eliminate all the above issues because they function like your own teeth. No more feeling embarrassed when removing your dentures, no more messy adhesives.

Implants are very durable and with proper dental hygiene will last a lifetime.

Dental Implants

Dental implants are replacement tooth roots that look and feel like your own teeth. They are designed to fuse with natural bone and become permanent. Implants provide a strong foundation for fixed (permanent) prosthesis such as crowns, bridges and dentures and are made to match your natural teeth.

To be considered for a Dental Implant you must:

1. Be healthy enough to undergo routine oral surgery.
2. Should have good oral hygiene.
3. Have enough bone to hold the implant.
4. Not be a Heavy smoker, Diabetic, Heart Disease and other Chronic Disorders
**Most patients need to be evaluated on an individual basis to determine if implants are the right choice.*
